

KG573 Foundations of Database: Assignment 1

Task: ER Diagram Design

Problem Statement: You are tasked with designing a database for an online bookstore. The system should manage the basic bookstore operations efficiently and correctly. Your task is to analyze the information requirements and design an appropriate database.

Here are some requirements collected for this task:

- Customers can browse books, view details, and place orders.
- Each book can have one or multiple authors.
- Customer place orders, which can include multiple books.
- Each order has a payment associated with it.
- Customers can leave reviews for each book they purchased.
- Each order can be assigned to only one staff member who processes the purchase.

Your task:

- Analyze the requirements, identify Entities, their possible attributes, keys, and relationships.
- Document your thought process and reasoning on paper or in MS Word.
- Design an ER diagram.`

Deliverable:

- Notes explaining how and why you selected entities, attributes, keys, and relationships.
- ER Diagram (digital or hand-drawn).
- Suggested tool: Lucidchart (free), but you may use any tool of your choice.

Note: A perfect ER diagram is not expected. The focus is to get started with database design process.

Submission Instructions:

Compile all your work, including notes, screenshots, ER Diagram photo and any observations, into a single MS Word document/PDF, and submit it on Blackboard.
